EXAMINER'S AMENDMENT ✓

1. Replace the existing abstract with the following:

--A high voltage bobbin of a fly back transformer for outputting high voltage comprises a bobbin body having a central hole for receiving a low voltage bobbin wound with a low voltage wire; input and output terminal sections integrally formed in upper and lower portions of the bobbin body and mounted with pluralities of input and output terminal pins; a plurality of insulating film layers wound on an outer surface of the bobbin body; high voltage wires each wound between two adjacent ones of the insulating film layers; and input and output hooks integrally formed on the outer surface of the bobbin body. The input hook catches a first one of the high voltage wires before the first wire is wound on the bobbin body, and the output hook catches the first wire wound on the bobbin body before the first wire is extended to the outside.--

2. Claims 1-11 are allowed.

The following is an examiner's statement of reasons for allowance: ✓

Claim 1 recites, inter alia, *input and output hooks integrally formed on the outer surface of the bobbin body, wherein the input hook catches a first one of the high voltage wires before the first wire is wound on the bobbin body and the output hook catches the first wire wound on the bobbin body before the first wire is extended to the outside.*

The references of record do not teach or suggest the aforementioned limitation, nor would it be obvious to modify those references to include such limitation.
